

BEFORE YOU START:

- Please check local electrical codes before beginning
- Turn power off before installing
- Make sure to use proper rated wire

TOOLS NEEDED:

- Drill with 1-3/8" bit

RECESSED INSTALLATION:

1. 12V Wet Location LED Pathway Lights provide unobtrusive yet powerful illumination as marker and accent lights. Perfectly suited for small spaces, installation is as simple as drilling a 1-3/8" hole (**Fig. 1**), feeding wires through that hole, and then pushing the puck up into the hole (**Fig. 2**). Mounting springs will capture the puck and hold it snugly.

2. Wire Pathway Light(s) to 12V LineDRIVE power supply (**Fig. 3**).

NOTE: Pathway Lights can be mounted in parallel runs. Please observe wattage limitations of power supply. Example: A 20 watt power supply can power up to 16* 1 watt 12V Pathway Lights.

***USE ONLY ELECTRONIC POWER SUPPLIES. DO NOT LOAD POWER SUPPLY ABOVE 80% OF MAXIMUM.**
